

## **Product description**

Colour	Weight (mg)	Size (mm)	Bulk density (g/l)	Packaging	Food approved
Black	1.0	3.0 – 5.5	16.5 – 19.5	Bulk / Bag	Yes

## **Physical properties**

	Test method	25g/l	35g/l
Compressive strength 25% strain (kPa) 50% strain (kPa) 75% strain (kPa)	ISO 844 5mm/min	110 180 420	175 250 550
Compression set 25% strain – 22 hours – 23°C (%)	ISO 1856 (Method C) Stabilising 24h	12.5	12.0
Burn rate (mm/min)	ISO 3795 12.5mm thick	95	70

# Moulding

ARPRO 5118 can be moulded using Crack Fill (CF) and Pressure Fill (PF):

Crack fill: preferably applied to Pre-Treated (PT) ARPRO.

Pressure fill: applied to either Pre-Treated (PT) or Non-Pre-Treated (NPT) ARPRO.

Version 09

This information is provided as a convenience to customers and reflects the results of internal tests conducted on ARPRO samples. While all reasonable care has been taken to ensure that this information is accurate as of the date of issue, JSP does not represent, warrant or otherwise guarantee, expressly or impliedly, the suitability, accuracy, reliability or completeness of the information. ARPRO is a registered trade mark.

5118

<sup>\*</sup> Shrinkage, surface aspect and cycle time are influenced by process parameters, tool and equipment layout, and part geometry.

### **Pre-treatment**

Recommended pre-treatment cycle with pressure tank environment and incoming compressed air both at 23°C:

Crack fill: 16 hours up to 3 bar, decrease and maintain at 1.3 bar throughout production.

Pressure fill: 5 hours up to 1 bar, decrease and maintain at 0.4 bar throughout production.

Pre-treatment cycles can be adapted according to moulding process, density and part geometry:

If internal cell pressure is too high, this may lead to fusion issues. In this case, decrease time, pressure or temperature to improve fusion.

Increase time, pressure or temperature to reduce moulded density and improve aspect.

Operating the pressure tank above ambient temperature, up to a maximum of 50°C, significantly shortens pre-treatment time.

#### Post-treatment

For moulded densities below 50g/l and depending on the parts dimensions, post-treatment at a temperature of 80°C is recommended for 3 to 8 hours. This helps to remove water content, as well as ensuring dimensional stability and a geometric shape.

## **Shrinkage**

Typical values range from 2% to 2.6%. The higher the moulded density, typically the lower the shrinkage.

## Storage

A storage temperature above 15°C is strongly recommended.

Indoor storage strongly recommended.

If stored outdoors, it is strongly recommended to keep the material indoors for 24 hours before moulding.
